DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- 1. Group I: claims 1-12 drawn to a method of screening a test substance of binding activity for MSP142.
- 2. Group II: claims 14-15 drawn to a pharmaceutical composition.
- 3. Group III: claim 17 drawn to a method for treating or preventing malarial disease in a mammal subject.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

- 4. The technical feature of Group II is a pharmaceutical composition. The technical feature of Group I is anticipated by Harris et al WO 1994/13277 June 23, 1994. Harris et al teach a pharmaceutical composition comprising analogue of suramin and a pharmaceutically effective carrier thereof for use in the prevention and/or treatment of malarial disease in a mammalian subject wherein the active ingredient is identified by performance (see STIC results).
- 5. Group I is a method of use of the technical feature of Group II, a pharmaceutical composition comprising analogue of suramin and a pharmaceutically effective carrier thereof for use in the prevention and/or treatment of malarial disease in a mammalian subject wherein the active ingredient is identified by performance.
- 6. Group III is a method of use of the technical feature of Group II, a pharmaceutical composition comprising analogue of suramin and a pharmaceutically effective

Application/Control Number: 10/561,196 Page 3

Art Unit: 1645

carrier thereof for use in the prevention and/or treatment of malarial disease in a mammalian subject wherein the active ingredient is identified by performance.

Group I and III lacks unity with Group II because they do not have the same technical feature.

7. The technical feature of Group II, a pharmaceutical composition comprising analogue of suramin and a pharmaceutically effective carrier thereof for use in the prevention and/or treatment of malarial disease in a mammalian subject wherein the active ingredient is identified by performance is known in the art. Group I and III lacks unity with Groups II, because the technical feature of Group II is anticipated by the art and therefore not "special" within the meaning of PCT Rule 13.2 because it does not provide for a contribution that the claimed invention makes over the art.

Election of Species

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Analogue Election Requirement to Group I

In addition, Groups I, detailed above, read on patentably distinct strucutres. Each analogue is patentably distinct because they have structurally different and further restriction is applied to each Group I.

For Groups I

A) C2;

B) C4;

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 1645

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Page 4

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nina Archie whose telephone number is 571-272-9938. The examiner can normally be reached on M-F 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's acting supervisor, Shanon Foley can be reached on 571-272-0898. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
